

Using Panamath in class

You have two options of using Panamath in class:

- 1) You show the test using the Powerpoint file provided in the folder you downloaded. All students complete Panamath at the same time in class.
- 2) Students individually test themselves using an online version of Panamath. This can be done in class if students have a computer with internet access or individually at home.

If you are using the Powerpoint version of Panamath and students fill out an answer sheet:

- 1) Open the Powerpoint file “912_BYDots.pptx”. Make sure that the slides show up properly and that each student has an answer sheet and a pen but nothing else on their desks.
- 2) Read the instructions on the second slide.
- 3) Go through the practice trials and have the students shout out their answers. Note that the images with blue and yellow dots will only show up briefly, but that you have to manually advance between trials.
- 4) Make sure that all students understand the task before you advance to the real test. Remind the students that during the real test, they should only circle their answer on the answer sheet and not shout out the answer.

If you are using the online version of Panamath:

- 1) Students should go to www.panamath.org and click on “Test Yourself” on the top right.
- 2) Select the Online version (full version of Panamath).
- 3) Complete the required information and follow the instructions.
- 4) Once a student completes the test, he/she should save the results and give them to you (either as a hard or a digital copy).
